

# Animeetrics Mobile and FIMS Architectures

- Animeetrics offers APIs and architectures at multiple levels of abstraction to suit all use cases.
  - High level GUI SDK for mobile devices
  - General web services SDKS
  - Low level C/C++ SDKS
- Two notions of security
  - Consumer
  - Enterprise

# Consumer

- Consumer fully controls his/her identity.
  - Leverages photo sharing web engines including Picasa and Flickr for storing photo enrollments.
  - Face signatures/templates stored on Animetrics Cloud
  - Persistence of face signatures directly linked to persistence of photos in photo cloud.

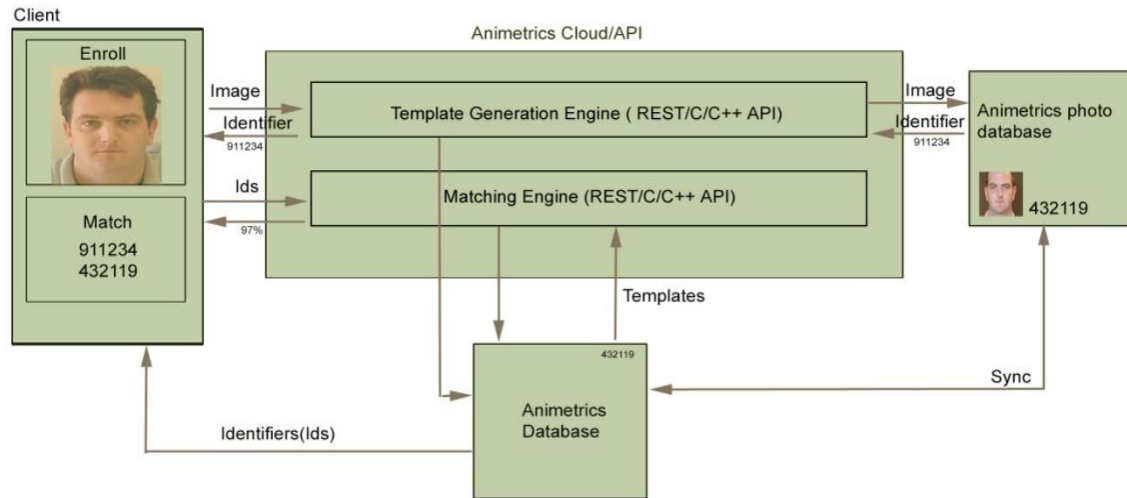

# Consumer Solutions: Social Networking Photo-Stores

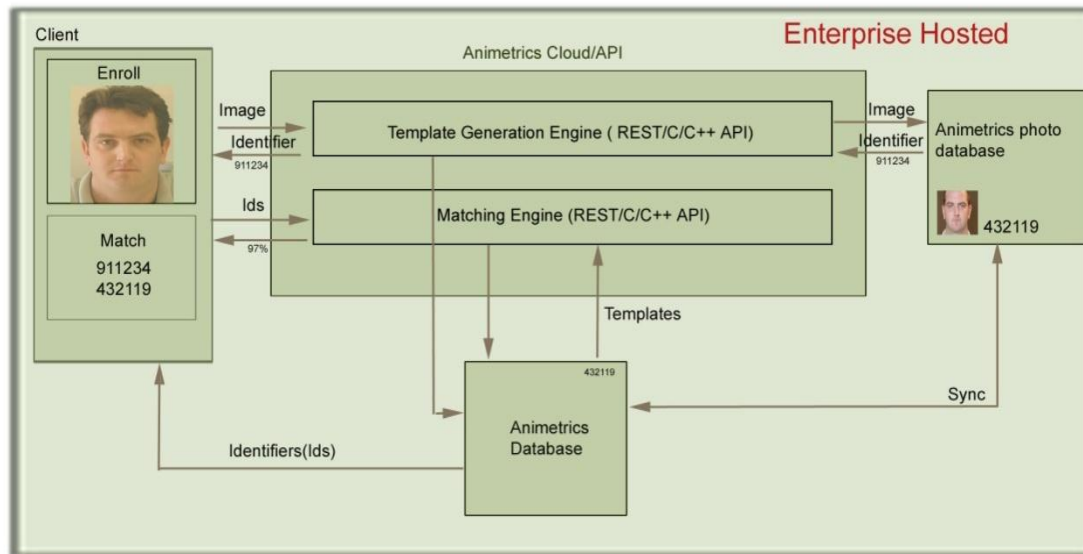

# Enterprise

- Identity information controlled by Corporation and possibly Corporate infrastructure.
  - Multiple options
    - Offsite Animetrics private photo storage cloud replaces social networking photo sharing. All matching and enrollment transactions through Web.
    - Onsite complete Animetrics system with private Animetrics photo storage.
    - Onsite Animetrics matching and signature generation engine. All data managed by existing Corporate infrastructure.

# Private Offsite Animetrics Cloud

# Private Onsite Animetrics Cloud

# Private Onsite Anometrics Engines, Enterprise infrastructure
